

Customer Service Guards

Why a **customer service guard**?

- A glass or plastic shield is a way to protect both employees and customers from the exposure of respiratory droplets.
- Glass is a great surface for shields because it stays clear and resists scratches. Plastics are a more economical option for short term use.

- The Centers for Disease Control and Prevention states the Coronavirus is thought to spread primarily from person-to-person.
 - Between people who are in close contact with one another (within approximately 6 feet).
 - Through respiratory droplets produced when an infected person coughs or sneezes.
- These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.
